abdohisham12.github.io/ (Portfolio)

Top Skills

Entrepreneurship
Aerospace Engineering
Space Systems

Languages

German (Elementary)
English (Full Professional)
French (Elementary)
Arabic (Native or Bilingual)

Certifications

AWS Educate Machine Learning Foundations
Introduction to GIS Mapping
The Basics of Google Cloud Compute Skill Badge
SQL for developers
Introducing Generative AI with AWS

Abdelrahman Hesham

Aerospace | Business Development | Embedded systems | Machine Learning | CinemaTech | SpaceTech | EduTech
Cairo, Cairo, Egypt

Summary

Abdelrahman is drawn to the space between having an idea and figuring out how to make it real.For me, technology is not just something to study or work with. It’s a way to explore problems, build useful products, and turn curiosity into something people can actually use. That’s what connects my interests in aerospace, AI, software development, and entrepreneurship.Abdelrahman's journey takes him across different domains. In SpaceTech, I’m interested in how engineering and intelligent systems can push the boundaries of what we can build and accomplish. In EduTech, through NestGo, I explore how AI can help people understand their skills and become better prepared for their careers. In CinemaTech, through Filmoria, I explore the intersection of movies and technology and how to provide safe content for our families.On the surface, these fields might seem far apart. To me, they share the same underlying question: How can we use technology to solve a real problem and build something people find valuable?Abdelrahman's background in aerospace engineering gives him a systems-oriented way of thinking. AI and software development expand the tools I can use, while entrepreneurship challenges me to think beyond whether something works technically. Who needs it? Why does it matter? How could it become a useful product?I enjoy moving between engineering, experimentation, and product thinking, especially when there’s something new to understand or build. I’m still exploring, learning, and refining where I can make the greatest contribution, with a consistent focus on turning ideas into practical solutions.

Experience

Aydn Labs
Embedded System Engineer
June 2026 - October 2026 (5 months)
Cairo, Cairo, Egypt

Develop and maintain software codes based on defined component requirements and component design.
Configure the different software components according to the specified requirements.
Deliver and integrate the software component in overall software according to defined high level design.
Develop component test plans and test cases to verify the correct functionality against the requirements.
Verify the software component functionalities in a defined HW target/platform.

AQMAAR
Space Mission Concepts Engineer
July 2025 - January 2026 (7 months)
Qesm 1st 6 October, Al Jizah, Egypt

Translate aerospace system requirements into software solutions.
Lead mission testing, establish validation protocols, and analyze telemetry to support hardware reliability and pre-deployment integration.
Conduct technical and operational analyses for Earth observation and IoT satellite missions to assess feasibility and define scope.
Simulate mission profiles in MATLAB, optimize orbital performance, and support ground station system architecture.
Assess space debris risks and develop disposal strategies in compliance with international regulatory frameworks.

Invisible Technologies
Mathematics Science Tutor
May 2025 - October 2025 (6 months)
United States

Simulating both learner and instructor roles to enhance model reasoning, explanation quality, and instructional clarity.
Assessed AI-generated responses in STEM topics (Mathematics, Statistics, Probability) for scientific accuracy and logical alignment. Supported prompt engineering through detailed feedback, content revision, and scenario generation. Leveraged academic background and science communication skills to help shape AI models into reliable educational tools.

Digital Egypt Pioneers Initiative - DEPI
Machine Learning Engineer
April 2024 - October 2024 (7 months)
Qesm 2nd New Cairo, Cairo, Egypt

159-hour training program on AI & Data science, covering supervised and unsupervised learning,
Azure AI services, MLOps with MLflow and Hugging Face, GANs and NLP with attention models

Education

Beni-Suef University

Bachelor of Applied Science - BASc, Aerospace, Aeronautical and Astronautical/Space Engineering · (September 2020 - July 2025)
